

Leemco Adapter - 2 x 2 Fpt x Bell

RGLFMA-200

Details

The L90 FPT adapters are designed to provide ease of connection to an irrigation remote control valve (RCV) while positioning the valve handle within 4" of grade. Outlets come in 1.5" or 2" female pipe thread and 2" inlet is designed for Leemco lateral tee or saddle LAT outlets. L90 FPT adapters are provided with a 1" side tapped plug designed for connection to a quick coupling valve assembly. The spigot end of the adapter simply inserts into a Leemco Lateral Tee or Lateral Saddle outlet and turns 360 degrees to the desired position. For applications that require an isolated valve before an electric valve, please refer to our Lateral Angle Valve or Lateral Globe Valve brochure for better alternatives. On LFA-200, spigot end inserts into Leemco LT - Series Tee or Saddle LAT outlet.
